

Info

Answering machine functionality:

COMfortel® Voicemail

**You love the simple extras?
Simply the best of everything?**

Then choose the COMfortel Voicemail! With just one simple procedure you can make a multi-purpose tool out of your system telephone. By pushing in a SD card into the card slot of the COMfortel 2500 you can upgrade your telephone with a convenient answering machine. Standard SD or SDHC cards transform the telephone into a storage for announcements, messages or call recordings. Gigantic possibilities: one gigabyte is good for more than 30 hours of recording. And the card slot allows up to 4 Gigabyte cards. Plenty of space for recordings and announcements.

Address your callers in a personal way!

Somebody is calling on your private number? He should get another message than somebody who tries to reach you on your business number or has used the number of your sports club. Choose different announcements for 10 extension numbers and 10 groups.

Distinguish yourself with fast reactions!

To be up to date when you are out of the office the COMfortel Voicemail offers convenient fast playback (remote polling without PIN) and automatic message forwarding e.g. to your mobile phone.

Professional functionality:

- Call recording automatically / upon key-stroke (indication tone can be deactivated)
- Recording of memos (dictating function)
- Configuration of Xtension keys with announcements (e.g. emergency, info, opening hours, holidays)
- Call acceptance and announcement allocation for different call types (internal / external / group / door /allowed numbers)
- Out of a pool of 250 possible announcements you can choose:
 - One announcement each with internal, external, group, door and allowed number calls (allowed numbers despite of activated call protection)
 - 10 group announcements and 10 announcements for trunk line numbers (MSNs/DDIs – when used with COMpact 5010/5020 VoIP, COMmander Basic.2/Business)
- Message forwarding
- Two fast playback numbers for simple polling e.g. from mobile phones and additionally from internal subscribers/groups
- Backup function: storage of the configuration and/or the telephone book, manually and automatically
- Transfer of the audio files with the configuration software COMfortel Set
- Standard SD cards can be used (test function in the telephone)

- Opening and storing of files on the SD card directly with the computer possible
- High-quality recording due to uncompressed recording

30 days testing free of charge.

The answering machine functionality (COMfortel Voicemail) you can test 30 days free of charge. The test period starts automatically when you insert the SD card for the first time. If you want to use this function permanently you can purchase the release code via the Upgrade-Center (www.auerswald.de/upgradecenter) of Auerswald at a low price. All you will need is the serial number of your telephone which you can find under "Information/serial number" in the menu of the telephone. The release code you can put in directly at the telephone.

Recording capacity – examples with different SD cards.
